Acknowledgments

ALTHOUGH this volume comprises the individual work of fourteen contributors, it represents a common enterprise largely undertaken within one framework. This general acknowledgment therefore supplements the specific acknowledgments that appear in the notes appended to the separate chapters.

The research reported in this book has been sponsored by the Cornell Program in Social Psychiatry, which, in turn, is administratively attached to the Department of Psychiatry in the Cornell University Medical College and to the Department of Sociology of the College of Arts and Sciences in Cornell University. During most of the time when this volume was being developed and written, the Program was also attached to the Department of Anthropology.

The Cornell Program in Social Psychiatry has received financial aid from a number of institutions. The work herein has been mainly supported by a program grant from the Ford Foundation's Behavioral Science Division. The Cornell Program is, however, an outgrowth of the Stirling County Study and the Midtown Manhattan Study. Both these Studies constitute a fundamental background for the projects described in this book. The Stirling County Study was carried out with funds derived primarily from four sources: the Milbank Memorial Fund, the Carnegie Corporation of New York, the Depart-

ment of National Health and Welfare of Canada, and the Department of Public Health of the Province of Nova Scotia. The Midtown Manhattan Study was given financial aid from the National Institute of Mental Health in the United States Public Health Service, the Milbank Memorial Fund, the Grant Foundation, the Rockefeller Brothers Fund, and the Corporation Trust Company. These foundations are not, of course, the authors, owners, publishers, or proprietors of this book and are not to be understood as approving, by virtue of their grants, any of the statements made or views expressed therein.

In addition to this general support, the following is to be noted. The work represented in Chapter II was made possible by fellowships granted to Charles Savage and Alexander H. Leighton from the Center for Advanced Study in the Behavioral Sciences. A study of Eskimos on St. Lawrence Island, Alaska, is referred to throughout this book and specifically in Chapters II, III, IV, VII, and IX. The 1954-1955 investigation of this population was conducted by Charles C. Hughes and Jane M. Murphy from funds supplied by the Social Science Research Center of Cornell University and by Dr. and Mrs. Rex Murphy. The 1940 study was carried out by Alexander H. Leighton and Dorothea C. Leighton on a joint fellowship from the Social Science Research Council. The study of adolescent symptoms reported in Chapter VI was supported by a grant from the Health Research Council of the City of New York and the Foundations Fund. The Health Research Council is also giving financial backing to the study of childhood symptoms described in Chapter VII. Chapter X reports a comparative analysis of materials gathered in the Stirling County Study and the Cornell-Navaho Southwest Project. Funds for the latter project were given by the Carnegie Corporation of New York.

Several chapters of this book have been written in the light of statistical guidance given by consultants to the Cornell Program in Social Psychiatry. Special acknowledgment is there-

fore given to Melvin S. Schwartz, David B. Macklin, and John S. Harding.

This book has been reviewed in whole or in part by a number of colleagues. Some of these reviews have been by authors of one chapter for authors of other chapters. Outside the list of contributors and statistical consultants, grateful acknowledgment is made especially to Dr. William T. Lhamon, Professor and Chairman, Department of Psychiatry, Cornell University Medical College, and Dr. Robin M. Williams, Jr., Professor of Sociology, Cornell University, who serve as members of an editorial board for the Cornell Program in Social Psychiatry. Dr. Allan R. Holmberg, Professor and Chairman of the Department of Anthropology, and Dr. Gordon Streib, Professor and Chairman of the Department of Sociology, both of Cornell University, have also reviewed the manuscript. For reading and commenting on particular chapters, appreciation is expressed to Robert Ascher, Charlotte Babcock, David V. Becker, Laurel H. Hodgden, Alice L. Nangeroni, and Peter Stokes.

Technical assistance has been given by Veronica A. Shaw and Marlene Mandel. Administrative and secretarial help has come from Amorita Suarez, Dee Watt, Norma Bain, and Donna Hamilton.

For all this aid and assistance, the editors and the authors express sincere thanks.
